

Lindsborg Community Hospital receives grant for shop equipment

Lindsborg Community Hospital was awarded a \$150 grant from the Smoky Valley Community Foundation to purchase a belt-disc sander for wood projects. With the high cost of shelving, stands, steps, bookcases, and storage units, having a commercial belt-disc sander will enable maintenance staff to make their own wood products, which will benefit the patients, visitors and staff for years to come. Pat Crawford, maintenance director, stated, "We are really glad the foundation could help us in

purchasing the sander. It will help in decreasing costs for wood projects, increase quality through custom fit and ultimately enhance and beautify our facility." The staff in the maintenance department have always kept our facility working smoothly by making the needed equipment of repairs across a variety of departments. The purchase of this belt sander will allow our maintenance staff to continue their fine workmanship traditions.
